— LIVE DUCK RACING ON MONAD

One block.
One step.

> For event hosts and their crowd watching the race on the big screen, DuckWek lets every phone join with one signature — the next **300 ms** block moves every duck, so the room races, not watches.

Scan, pay a 0.10 USDC ticket, and join the race.

90,000	200,000	205,000
ducks in Chicago	ducks in Cincinnati	Guinness record

PLAY duckwek-app.vercel.app

— THE PROBLEM

The ducks race. The room watches.

01

A draw is random.

You buy a numbered duck. The river picks the winner. The crowd can’t change the outcome.

02

The room is passive.

One screen, hundreds of phones, no shared game.

03

No proof after the finish.

Digital versions added an animation. The result still wasn’t provable.

So how do we make the room race?

— THE SOLUTION

Now the room races.

INSTANT

Scan. Sign once.

0.10 USDC ticket. Gas sponsored. No MON.

TOGETHER

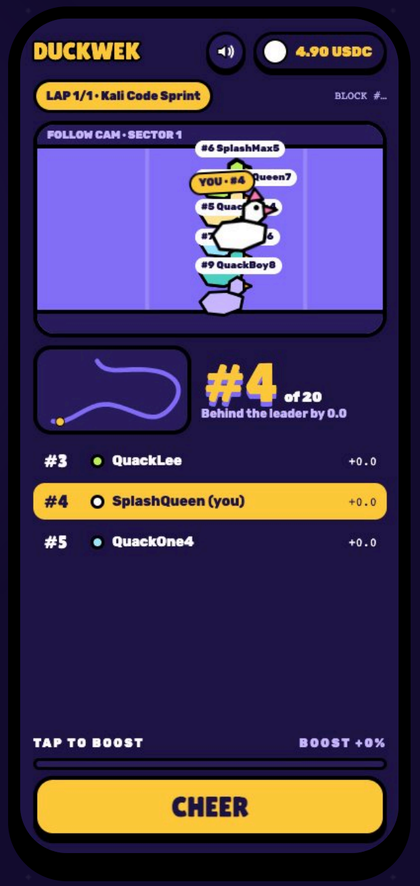

Every block moves every duck.

CHEER lets the room change the outcome.

PROVABLE

Seed on-chain. Replay it.

Every tick is a transaction; anyone can recompute the race.

THE PHONE IS THE CONTROLLER

— HOW IT WORKS

Seed on-chain. Race off-chain. Settle on-chain.

Sign
One EIP-2612 permit. The relayer submits; the player pays no gas.

2 Pay
The Vault charges the ticket under the permit. The host pays 1 USDC rent.

3 Start
The Race fixes `startBlock` and a seed from `prevrandao`.

4 Tick
One tx per block. `n = block - startBlock`.

5 Settle
The standing root, the podium and the soulbound titles go on-chain.

`startBlock`
seed + participants

+1
tick tx · duck step 1

+2
tick tx · duck step 2

+3
tick tx · duck step 3

ON-CHAIN seed · tick count · standing root · podium

OFF-CHAIN positions · overtakes · CHEER

Anyone can replay from the seed, the steps and the cheer log.

SEED
`keccak(prevrandao, roomKey, players)`

CHEER LOG
`taps[player][step]`

REPLAY
`seed + steps + cheer → standing`

— WHY STATS MATTER

Fast is not always first.

Sprint

Speed 4 • Weight 1 • Boost 0

SPEED	4/4
WEIGHT	1/4
BOOST	0/2

Balanced

Speed 2 • Weight 2 • Boost 0

SPEED	2/4
WEIGHT	2/4
BOOST	0/2

Tank

Speed 1 • Weight 4 • Boost 2

SPEED	1/4
WEIGHT	4/4
BOOST	2/2

PARTS ADD TO THE TEMPLATE

Buroq Wings
+2 speed • 0 weight • −1 boost

Turbo Tail
+1 speed • +1 weight • 0 boost

Iron Bill
−1 speed • +1 weight • +2 boost

```
step = base + speed - weight + noise + catch-up + boost - splash
```

Kali rewards grip · Alpine rewards speed

No part wins on both tracks. `Iron Bill` on Kali; `Buroq Wings` on Alpine.

— CHEER

The room can change the race.

TAPPER • ENERGY 8.0 / 8.0 MAX +20%

5/s	20%	−0.5
tap rate	speed cap	energy / quiet step

A tapper can overtake.

Within the cap, CHEER adds up to 20% speed. Taps land on the next computed step and are recorded in the cheer log.

Not guaranteed.

The race still has noise, splash, catch-up and the finish. CHEER is an input, not a button.

Server-authoritative. The cheer log is hashed into the standing root, so the replay includes the room.

— WHY MONAD

The chain is the clock.

300 ms	600 ms	10,000+	EVM
blocks	finality	TPS	Solidity · Foundry · viem

One tick per block. 48,264 gas per tick. Players pay 0 MON. Real-time, many small transactions, multiplayer — this race needs a fast clock, not a server.

— BUSINESS

We don't take a bet. We take a fee.

Track rent Host creates a room	**1 USDC** 50 / 50 · platform 100% protocol
Ticket Player joins the room	**0.10 USDC** 50 / 50 · platform 100% protocol
Part license Player buys a part	**1 USDC** 85 / 15 creator / protocol

No prize pool. Podium titles are soulbound and cannot be bought.

— THE VAULT FLOAT

TVL is USDC held in the Vault.

Player balances + creator earnings + protocol fees. Pull payout: everyone withdraws their own.

```
per room = rent + 0.10 × tickets + 1 × parts
```

NO EMISSIONS · NO TOKEN · NO YIELD
